

On-Call Runbook (PDF)

On-Call Runbook ? TechNova Platform

On-Call Rotation

Engineering maintains a primary and secondary on-call engineer via PagerDuty. Rotations change weekly (Monday 09:00 UTC). Calendar: oncall.technova.com.

First 5 Minutes Checklist

1. Acknowledge PagerDuty alert within 5 minutes.
2. Open incident channel #incident-YYYYMMDD-shortname.
3. Check Datadog dashboard Platform Overview for error rate, latency, saturation.
4. Assign yourself IC or delegate to senior if SEV-1.
5. Post initial status: "Investigating [alert name], impact unknown."

Common Alerts

High Error Rate ? Billing Service

- Check recent deploys in GitHub Actions (last 2 hours).
- Review Stripe webhook failures in Billing admin.
- Roll back if deploy correlation > 80%: `kubectl rollout undo deployment/billing` -n production.
- See incident INC-5023 for billing connector timeout pattern.

API Gateway 502/503

- Verify Kong pod health: `kubectl get pods -n gateway`.
- Check upstream User/Billing service health endpoints.
- Scale gateway replicas if CPU > 85%: `kubectl scale deployment/kong --replicas=5`.

Elasticsearch Cluster Yellow/Red

- Check disk usage on data nodes; delete old indices per retention policy.
- Pause heavy reindex jobs in Document Service.

PostgreSQL Connection Pool Exhausted

- Identify long-running queries in Datadog DBM.
- Restart affected service pods after killing runaway queries (with TL approval)

Escalation Path

Primary (15 min) ? Secondary (15 min) ? Engineering Manager ? VP Engineering ? CTO (SEV-1 only).

Handoff

End of shift: post summary in #engineering-oncall with open incidents and flaky alerts.
